

## Objectives

A bespoke replacement Head Office was required to provide additional space to enable this crucial emergency service to expand and continue its vital work.

As part of the full Project Management service, every detail of the project was taken care of from initial conception to completion.

## Solutions

The new Head office needed to incorporate shared working space for team members to be able to work collaboratively.

A redesign of the building took into consideration the needs of each department and provided intelligent solutions for the internal space layout. This has enabled the building to function more effectively as a whole.

## Results

As part of the full Project Management service, every detail of the project was taken care of from initial conception to completion.

ModuleK's full steel space frame design gives the building a 60-year design life. Key external design features included Kingspan cladding and a traditional brick façade.

## Air Ambulance Kent Surrey Sussex
