

Modulek

At Modulek, we understand the importance that a learning environment can make. Not just to a child's education but also their wellbeing and personal development.

As trusted specialists within the modular educational building sector, we take responsibility to ensure our building designs provide your children with the safe space they need to flourish and succeed. As market leaders in the education sector, we don't believe in a one size fits all approach to our buildings. We offer a true hybrid approach to our design and construction, where we can incorporate traditional build elements along with the cost and speed benefits of modular.

We work with your education specialists from the earliest stages to design bespoke environments, tailored to the specific requirements of the children and staff using them. With a strong background

in SEN provision, we understand the sometimes complex needs you face as providers. Whether that is to have light and airy open classroom space to learn as well as separate quiet areas or ensuring state of the art technology and equipment is accessible to all children.

Whatever your need we can work with you at design stage to ensure it is met.

The pupils have settled so well into their new school building. When we were working with Modulek to design our building it was essential for me as Headteacher to take into account our

SEN needs as all pupils at Moon Hall are dyslexic. We wanted to create an environment that was calm, with minimal distractions and also encouraged the pupils to learn. Natural lighting with lots of windows, state of the art technology and excellent sound proofing has all ensured that pupils can focus as best they can on the learning that is taking place. The new building is a wonderful addition to our school, and we are thrilled with the improved facilities as are our pupils and their families.

Michelle Catterson, British Dyslexia Association Chair & Executive Head of Moon Hall School.
